Chapter 22 Fungi - legacy.hopkinsville.kctcs.edu

Fungi, like plants, arose mostly sessile and seemingly rooted in place. They possess a stem-like structure similar to plants, as well as having a root-like fungal mycelium in the soil. In addition, their mode of nutrition was poorly understood. 24.2: Classifications of Fungi.

24: Fungi - Biology LibreTexts

Concept 31.5 Fungi have a powerful impact on ecosystems and human welfare. Ecosystems depend on fungi as decomposers and symbionts. Fungi are important decomposers of organic material, including cellulose and lignin of plant cell walls. Fungi and bacteria are essential for providing ecosystems with the inorganic nutrients responsible for plant growth.
