Principles of Epidemiology | Lesson 1 - Overview
Epidemiology is the study of the determinants, distribution, and frequency of disease (who gets the disease and why) Iepidemiologists study sick people Iepidemiologists study healthy people Ito determine the crucial difference between those who get the disease and those who are spared

Lecture 1: Introduction to Epidemiology
In the definition of epidemiology, "distribution" refers to descriptive epidemiology, while "determinants" refers to analytic epidemiology. So "distribution" covers time (when), place (where), and person (who), whereas "determinants" covers causes, risk factors, modes of transmission (why and how).
