Lithic Raw Materials. Stone was an important resource for the prehistoric occupants of the Bosque River valley. Not only did the inhabitants require knappable material, such as chert, for their tools and weapons, they also used stone for their hearths and for intensive cooking of certain plant foods in oven-like features.

Lithic Raw Materials - Texas Beyond History

In archaeology, lithic technology includes a broad array of techniques used to produce usable tools from various types of stone. The earliest stone tools were recovered from modern Ethiopia and were dated to between two-million and three-million years old. The archaeological record of lithic technology is divided into three major time periods: the Paleolithic, Mesolithic, and Neolithic. Not all cultures in all parts of the world exhibit the same pattern of lithic technological development, and s

Although lithic raw material data suggest that Kirk groups were highly mobile (e.g., see this paper) the area of the "horizon" is much too large for it to be the product of a single group of people: the hunter-gatherers discarding Kirk points in Ontario are not the same individuals as those discarding Kirk points in Florida.

The study of the raw materials includes the macroscopic assignation of the remains to some of the basic lithic categories (quartzite, quartz, and chert/flint) and has focused specifically on the non-detritic fine-grained siliceous varieties (chert, radiolarite and flint) for two main reasons: they are the most common types in the two sites (especially in El Espertín) and the largest number of previous studies has been performed on those types of rocks.

variety of lithic materials, the raw resources of which stone crafts and tools were made, were locally available in the Black Warrior Valley. However, raw materials of a higher physical quality, as well as an apparently higher cultural value, were of a non-local origin and were therefore limited in their circulation.

lithic raw material is non-existent. Raw-material sourcing indicates that stone tools were imported from afar or were scavenged from nearby sites. Archaic-style hafted bifaces (projectile points), particularly those made from thermally-altered silicified coral, have a significant association with mortuary-related contexts.

All known lithic sources located on individual county maps have been digitized so this information can be coupled with the Excel lithic inventory for a GIS format. With the creation of a GIS for the Lithic Raw Material Assemblage, data can be use with a variety of base maps including Iowa Department of Transportation maps, 1:100,000 scale and 1:24,000 scale U.S.G.S. topographic maps (Figure 8).

As the lithic raw materials sources are ubiquitous and abundant, the availability of lithic material would not have been a risk factor for the human groups that inhabited this area [14, 33]. Due to this, lithic provision strategies would have been embedded (sensu [41]) within other coastal subsistence strategies, such as shellfish procurement, and fishing.
