The more specific immersion approach for observer design is then emphasized, while optimization-based methods are also presented as an alternative to analytic observers. Various practical application examples are included in those discussions, and some fields of application are further considered: first the problem of nonlinear output regulation is reformulated in a perspective of observers, and then the problem of parameter or fault estimation is briefly mentioned through some adaptive ...

Robust adaptive observer for nonlinear systems with ...

Although observer design for linear systems is well established and is successfully applied in many engineering systems, the inherent nonlinearity of the dynamic systems that control engineers face limits its applications. Hence, the design of a nonlinear observer remains a hot research topic in the control systems society [11,26,27]. This paper aims at applying a state-of-the-art optimization algorithm to demonstrate its applicability to develop a nonlinear observer satisfying multiple ...

While most of the available results on
high-gain observers are for single-output
systems, Grip and Saberi 2 show how to
design observers for a class of
multi-output observable linear systems
perturbed by nonlinear time-varying
terms. A new feature of their work is the
use of output shaping filters to extend
the class of admissible systems.
