Selective Laser Trabeculoplasty In Chinese

Purpose: To study the effectiveness and safety of selective laser trabeculoplasty (SLT) on primary open-angle glaucoma and ocular hypertension in Chinese eyes. Methods: This was a prospective randomized controlled clinical study in which 58 eyes of 29 patients with primary open-angle glaucoma or ocular hypertension were included. One eye of each patient was randomized to receive SLT (Group 1) and the fellow eyes received medical treatment (Group 2).

Five-year follow up of selective laser trabeculoplasty in ...

This book contains a collection of medical research involving the use of Selective Laser Trabeculoplasty (SLT) in the treatment of glaucoma for a Chinese population. As the outcome of glaucoma laser and surgery can have variations among different ethnicities, this book serves to provide Ophthalmic surgeons treating Asian patients, with an evidence based and simple reference guide to maximize the potential of SLT.

Selective Laser Trabeculoplasty in Chinese Eyes: Lee ...

Purpose: To study the effectiveness and safety of selective laser trabeculoplasty (SLT) on primary open-angle glaucoma and ocular hypertension in Chinese eyes. Methods: This was a prospective rando...

Five-year follow up of selective laser trabeculoplasty in ...

AIM: To investigate the determinants of success of selective laser trabeculoplasty (SLT) in Chinese open-angle glaucoma patients. METHODS: This prospective cohort study sequentially recruited Chinese subjects with unilateral or bilateral primary open-angle glaucoma (POAG) or normal tension glaucoma (NTG).

Predictors of success in selective laser trabeculoplasty ...

Selective Laser Trabeculoplasty (SLT): A Laser Procedure to Lower Eye Pressure. What is SLT? SLT is a laser procedure performed in the office to lower eye pressure. How does SLT work? Laser energy is applied to the trabecular meshwork. The trabecular meshwork is located in the front of the eye and is the natural drain for fluid.

Selective Laser Trabeculoplasty (SLT) | Wills Eye Hospital

Purpose Worldwide, in recent years, selective laser trabeculoplasty (SLT) has developed into a very successful therapy for glaucoma. Material and Methods The article provides a review of the literature from PubMed and clinical experience. Results SLT is equally efficacious to argon laser trabeculoplasty (ALT) and to a first-line glaucoma ...

[Status of Selective Laser Trabeculoplasty (SLT)].

Selective laser trabeculoplasty (SLT) has been widely used in the clinical management of glaucoma, both as primary and adjunctive treatment. As new evidence continues to arise, we review the current literature in terms of indications and efficacy, surgical technique, postoperative care, repeatability, and complications of this therapy. SLT has been shown to be effective in various glaucomas ...

A Review of Selective Laser Trabeculoplasty: Recent ...

Argon laser trabeculoplasty (ALT) was introduced by Wise and Witter in 1979 for the treatment of medically uncontrolled glaucoma. Soon after its introduction, the efficacy and safety of this new technique was studied in a large multicenter prospective clinical trial funded by NEI, Glaucoma Laser Trial (GLT), in which eyes receiving ALT 360 degrees were compared with timolol monotherapy.

Laser Trabeculoplasty: ALT vs SLT - EyeWiki

Selective Laser Trabeculoplasty (SLT) is a safe and innovative technology that uses lasers to target only certain cells of the trabecular meshwork of your eye, leaving the tissue surrounding these cells untouched. The trabecular meshwork consists of the tissue in the eye responsible for draining the fluid of the eye.

Glaucoma - SLT Treatment - Upstate New York, Central New York

Selective Laser Trabeculoplasty, or SLT, is a form of laser surgery that is used to lower intraocular pressure in glaucoma. It is used when eye drop medications are not lowering the eye pressure enough or are causing significant side effects. It can also be used as initial treatment in glaucoma.

Selective Laser Trabeculoplasty: 10 Commonly Asked ...

To investigate the determinants of success of selective laser trabeculoplasty (SLT) in Chinese open-angle glaucoma patients. Methods: This prospective cohort study sequentially recruited Chinese subjects with unilateral or bilateral primary open-angle glaucoma (POAG) or normal tension glaucoma (NTG).

Predictors of Success in Selective Laser Trabeculoplasty ...

INTRODUCTION. Selective laser trabeculoplasty (SLT) works just as well in IOP-lowering as anti-glaucoma medication and argon laser trabeculoplasty (ALT) 1,2 but only utilizing 1% of the energy in ALT hence making it a safer treatment for open angle glaucoma. 3-12 While SLT is safe and almost free of permanent damages to the trabecular meshwork and cornea, 13 not everyone that is being ...

Predictors of Success in Selective Laser Trabeculoplasty ...

By comparison, selective laser trabeculoplasty (SLT) is designed to lower IOP after a single outpatient procedure. This has given renewed significance to the 2019 LiGHT trial, ...

Selective Laser Trabeculoplasty's Value Rises During COVID-19

Aims: To compare the intraocular pressure (IOP) lowering effect and safety profile between pattern scanning laser trabeculoplasty (PSLT) and selective laser trabeculoplasty (SLT) in patients with primary open-angle glaucoma (POAG) or ocular hypertension (OHT) over a 12-month follow-up. Methods: 132 patients with POAG or OHT were consecutively enrolled and randomised (1:1) to receive PSLT (n=65 ...

ARGON LASER TRABECULOPLASTY (ALT) or SELECTIVE LASER TRABECULOPLASTY (SLT) Laser trabeculoplasty (ALT or SLT) is an office based procedure performed to lower eye pressure in patients with open angle glaucoma. Patients whose eye pressure is still too high even though they are already on 1 or more eye medications or are intolerant to some of the ...

Laser Trabeculoplasty - Glaucoma Institute New Jersey NJ

SLT (Selective Laser Trabeculoplasty) is a safe and simple in-office laser treatment that effectively reduces eye pressure for most patients with glaucoma. The SLT mechanism of effect does not rely on medicines, instead, it uses an advanced laser system to target only specific cells of the eye—those containing melanin, a natural pigment.
